Hello! I'm Hal - a programmer, a problem solver, and a people-person by nature. My skill set includes technologies such as Ruby on Rails, Javascript, React with Redux, CSS/HTML, SQL, and Postgres. I am also proficient with reusable development concepts like database management, object-oriented programming, and self-guided learning. As someone who is also passionate about improving the lives of others, a position with Karat appeals to both my technical skills and my personal values.

I am a graduate of Flatiron School here in Seattle, where I learned the core concepts programming and gained hands-on experience with wiring up a full stack application from backend to front. In my capstone project, I used Rails as an API to store user data and created a frontend in React to display information and create an accessible, intuitive interface. In other projects, I became adept at learning new frameworks and incorporating them quickly, such as my use of Phaser.io to create a fun, single page game written in Javascript. Once I graduated, the school then brought me onto the team as a coach, where I used my communication and coding skills to guide and improve code written by students currently in the software engineering program.

My previous roles have been tech-adjacent, such as writing technical blogs and copy for PhaseWare, Inc, and providing IT support for Accretive Technology Group. Im excited at the opportunity to apply my burgeoning skill set in an apprenticeship setting with Karat. Im setting out to establish some career roots in 2020 and I would love for Karat to be a part of that growth. Please feel free to contact me with any questions!

BEST,

HAL DUNN
